Hiring Manager
M9

Dear Hiring Manager,

I'm thrilled to apply for the Software Engineer Intern position at M9. As someone deeply interested in secure, device-based AI solutions, I admire M9's mission to redefine AI workflows through innovative tools like M9 Developer. With a Master's in Information Systems and over two years of experience as a Software Engineer at Capgemini, I have gained hands-on expertise in building, optimizing, and supporting applications for both front- and back-end environments. At Capgemini, I led the development of Fiori web applications for SAP using HTML, CSS, and JavaScript and contributed to SAP Inventory Manager, improving user efficiency and reducing support needs. These experiences have honed my technical skills and my understanding of the critical role of secure, scalable software in enterprise environments.

My background includes proficiency in languages such as Python, JavaScript, and SAP ABAP, along with frameworks like ReactJS, Express.js, and Springboot, which I am eager to bring to M9. I am particularly drawn to M9's focus on privacy and data security through on-device AI. The flexibility to integrate custom LLMs aligns perfectly with my interest in secure, tailored AI solutions, and I'm excited by the possibility of contributing to a tool that enhances developer productivity without compromising data integrity.

Beyond my technical skills, I'm passionate about collaborative problem-solving and continuous learning. M9's commitment to innovation and fostering a collaborative environment excites me, and I'm enthusiastic about the opportunity to contribute to your team and help advance M9's pioneering solutions.

Thank you for considering my application. I look forward to the opportunity to discuss how my background and passion for AI-driven software align with M9's mission.

Warm regards,
Roshan Shetty
